

SUMMATIVE ASSESSMENT (Practice)

ACADEMIC YEAR: 2025-2026

DEPARTMENT: INFORMATION COMMUNICATION TECHNOLOGY (ICT)

OPTION: INFORMATION TECHNOLOGY (IT)

RTQF: LEVEL 6 YEAR: 1

SEMESTER: 2

MODULE NAME: Front-End Development

MODULE CODE : ITLDF601

CREDIT UNIT : 12

DATE : 30/April/2026

DURATION: 2 hours (9h00)

MAXIMUM MARKS:30 MARKS

INSTRUCTIONS:

1. Cell phone and any other electronic device are not allowed in an examination room
2. Start each question on a fresh page.
3. Make sure you fill the answer booklet cover page with required information with a legible handwriting.
4. Use of internet is not allowed.
5. Write all answers in the answer booklet provided and don't remove any sheet from it

Module leader: NIYONSHUTI Yves

Moderator 1: MANIRAGUHA Mohamed

Moderator 2: BAMPIRE Delphine

Designing a Living Patient Appointment Experience

You are designing a mobile-first healthcare product for patients.

The system should help users:

- Recognize symptoms
- Book an appointment
- Navigate the hospital visit
- Complete follow-up after returning home

The experience must feel like a **“living system”**, not just static screens. It should guide users visually, respond to actions, and reduce confusion—especially since users may be sick or stressed.

Constraints

Your design must consider:

- Low internet connectivity (optimize for lightweight interactions)
- First-time smartphone users (intuitive and simple UX)
- Users in discomfort or stress (low cognitive load, calming UI)
- Some offline functionality (graceful fallback where possible)

PART 1 — PRODUCT DESIGN (Figma Required) /20marks

Design a **fully interactive prototype in Figma** simulating a real product experience.

Required User Flow

Include the following journey:

1. Symptom input (guided and simple)
2. Doctor discovery (smart suggestions)
3. Appointment booking
4. Confirmation & reminders
5. Hospital arrival / check-in
6. Live waiting experience
7. Post-visit summary
8. Follow-up / medication reminder

Figma Requirements

Your work must demonstrate:

- Use of Auto Layout for responsive design
- Components and variants (buttons, cards, inputs, etc.)
- Interactive prototyping (not just screen-to-screen navigation)
- Meaningful transitions and micro-interactions
- A structured and reusable design system

We expect a clean, well-organized file.

PART 2 — Implementation /10marks

Implement all the mockup designed using react.js tailwind framework .

Deliverables

Please submit:

- Figma file (share with ydiasniyonshuti@yahoo.fr)
- Implementation code of your system on github repo(share with ydiasniyonshuti@yahoo.fr)

Timeline

Please complete and submit before 30 April, 2026 23:59

Evaluation Criteria

We will evaluate based on:

- UX thinking and problem-solving
- Creativity and originality
- Quality and consistency of UI design
- Use of interaction and motion
- Clarity of storytelling
- Structure and professionalism of your Figma file
- Well-structured codes
- Similarity of mockups with real implementation

Good Luck!
